Introduction

ATAEdu is a **Mobile and Web App.** This is a customizable application developed with latest technology to create **a remote platform between teachers and students** to impart knowledge and manage learning activities.

This is a **Web and Mobile based remote learning platform** to deliver, manage and monitor distance education.

- Administrators can manage subject, course, students' and teachers' records. They can define class routines, manage registrations and admissions, assign courses, summarize attendances, conduct examinations and produce results.
- Professors can view their class routines and take online attendance of the students, can upload different type of study materials for their students. They can communicate with students, assign task and provide feedbacks/comments.
- Students can view their class routine any time, anywhere by login with **Username and password** in this app. The student also access to view the **attendance, study material, and operate library**. They are always updated by app notification, messages and results. **Through the app student can contact the administration any time.**

Administrator module - snapshots

In the Administrator module we shall also define all students' and faculty records. Then we shall assign each student to various batches, subjects, courses.
We shall also map each faculty to a subject and create the class routines.
We shall maintain the attendance register in this module.
This module allows us to replicate the institution in ATAEdu.
One can then start and seamlessly operate all the functions of the institute – big or small – from the rest of the modules.
